

# Multi-Family

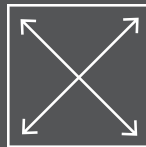

## CASE STUDY

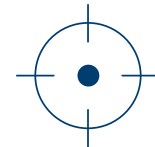

### PROJECT LOCATION

Jones 421 Building  
Sioux Falls, SD

### PROJECT SIZE

One 2-bedroom unit to  
begin testing of sound  
deadening; more units to come

### PRODUCT SCOPE

Acoustical Storm Door  
S703 Acoustical Panels  
ComfortSEAL Windows

## PROBLEM

A bar/lounge next door has created so much noise, residents of the upscale condominium threatened to sell their brand new condominium units due to noise pollution.

## SOLUTION

Sound Control Systems applied acoustical storm door, panels and ComfortSEAL windows to the unit and performed testing. Decibel ratings were cut in half after acoustical products were applied.

## RESULT

The unit owner is able to co-exist with the business next door. These applications reduce noise and have energy saving qualities that will be used throughout the Jones 421 building.

Acoustical Storm Door, Acoustical Panels and  
ComfortSEAL Windows
